

Healthcare

Problem Statement: [Resource allocation](#)

Development after phase1:

We have developed front end which has an feature of providing the information about near by hospital and availability of resources like number of empty beds, number of doctor, total number of seats and pharmacy available. We have also given a feature about online consultancy which is essential need in today's generation. It contains two option of either booking online consultancy or prepare a offline meeting with doctor in their nearby hospitals with their free time slots.
